IIT-JAM CHEMISTRY-(CY) 2016

TEST : ATOMIC STRUCTURE

Time : 00:50 Hour   **Date : 04-07-2015**
                                                                               M.M. : 60

Instructions:
- **Part-A** contains 10 Multiple Choice Questions (MCQ). Each question has 4 choices (a), (b), (c) and (d), for its answer, out of which **ONLY ONE** is correct. For each correct answer you will be awarded **3 marks**. For each incorrect answered **1 mark** will be deducted.
- **Part-B** contains 05 Multiple Select Questions(MSQ). Each question has 4 choices (a), (b), (c) and (d) for its answer, out of which **ONE or MORE than ONE** is/are correct. For each correct answer you will be awarded **2 marks,** there is no negative marking in this section.
- **Part-C** contains 10 Numerical Answer Type (NAT) questions which contain **2 Marks** for each, and there is no negative marking.

PART- A

1. A particle is moving in one dimensional box between $x = a$ and $x = b$. The potential energy is such that the particle can not be outside these limits and the wave function in between is $\psi = \dfrac{A}{x}$. The average value of x is:

   (a) $\sqrt{\dfrac{ab}{b-a}}$
   (b) $\sqrt{\dfrac{ab}{b-a}}\ell n\dfrac{b}{a}$
   (c) $\dfrac{ab}{b-a}\ell n\dfrac{b}{a}$
   (d) $\sqrt{\dfrac{ab}{b-a}}\ell n\dfrac{a}{b}$

2. An electron is confined in a 1-D box of 1 nm long. How many energy levels are there with energy less than 10 eV is:

   (a) 5   (b) 10   (c) 15   (d) 16

3. Identify which of the following operators is not hermitian ?

   (a) $\dfrac{\hbar}{i}\dfrac{d}{dx}$
   (b) $i\dfrac{d^2}{dx^2}$
   (c) $\dfrac{d^2}{dx^2}$
   (d) x^2

4. TThe angle between the angular momentum $l = 2$ and the z-axis for $m_l = 2$ is:
   (a) 35.3   (b) 65.9   (c) 114.1   (d) 144.7

5. A hydrogenic orbital with radial function of the form $r^\alpha \exp[-\beta r]$ and ϕ–part as $\exp[-3i\phi]$ corresponds to

   (a) $n > 4, l > 3, m = 3$ (b) $n = 4, l = 3, m = -3$
   (c) $n = 4, l > 3, m = 3$ (d) $n > 4, l = 3, m = -3$

6. A particle is in a one-dimensional box with a potential V_0 inside the box and infinite outside. An energy state corresponding to $n = 0$ (n : quantum number) is not allowed because
   (a) the total energy becomes zero
   (b) the average momentum becomes zero
   (c) the wave function becomes zero everywhere
   (d) the potential $V_0 \neq 0$

South Delhi: 28-A/11, Jia Sarai, Near-IIT Hauz Khas, New Delhi-16, Ph : 011-26851008, 26861009 www.careerendeavour.in

North Delhi: 33-35, First Floor, Mall Road, G.T.B. Nagar (Opp.- Metro Gate No. 3), Delhi-09, Ph: 011-65462244, 65662255

7. An eigenstate of energy satisfie $H\psi_n = E_n\psi_n$. In the presence of an extra constant potential V_0

   (a) both E_n and ψ_n will change

   (b) both E_n and average kinetic energy will change

   (c) only E_n will change, but not ψ_n

   (d) only ψ_n will change, but not E_n.

8. Compare the difference of energies of the first excited and ground states of a particle confined in (i) a 1-d box (Δ_1), (ii) a 2-d square box (Δ_2) and (iii) a 3-d cubic box (Δ_3). Assume the length of each of the boxes is the same. The correct relation between the energy differences Δ_1, Δ_2 and Δ_3 for the three states is

   (a) $\Delta_1 > \Delta_2 > \Delta_3$ (b) $\Delta_1 = \Delta_2 = \Delta_3$ (c) $\Delta_3 > \Delta_2 > \Delta_1$ (d) $\Delta_3 > \Delta_1 > \Delta_2$

9. The correct statement about both the average value of position $(\langle x \rangle)$ and momentum $(\langle p \rangle)$ of a 1-d harmonic oscillator wavefunction is

   (a) $\langle x \rangle \neq 0$ and $\langle p \rangle \neq 0$

   (b) $\langle x \rangle = 0$ but $\langle p \rangle \neq 0$

   (c) $\langle x \rangle = 0$ and $\langle p \rangle = 0$

   (d) $\langle x \rangle \neq 0$ but $\langle p \rangle = 0$

10. The value of the commutator $\left[x, \left[x, p_x \right] \right]$ is

    (a) $i\hbar x$ (b) $-i\hbar$ (c) $i\hbar$ (d) 0

PART- B

11. Analyse the function given, $\psi_{n,\ell,m} \propto \rho^2 \, e^{-\rho/3} \sin\theta \cos\theta \cos\phi$
    The correct statement is
    (a) Angular node corresponding to this function = 3 and radial node corresonding to this function = 0

    (b) The z-component of angular momentum corresponding to the above function is $\dfrac{h}{2\pi}$

    (c) Total angular momentum corresponding to this function $\dfrac{3h^2}{2\pi^2}$ and energy corresponding to this function is -0.055 a.u.

    (d) Average value of $\langle r \rangle$ corresponding to above function is $12a_0$.

12. Consider the statement. The ***correct*** statements are
    (a) In the Bohr atom the angular momentum always had a non-zero value. While in the modern theory the angular momentum is zero in S state only
    (b) In Schrodinger model n has nothing directly to do with angular momentum, while on Bohr model n was measure first of the angular momentum of the system.
    (c) If a hydrogen atom in the ground 1s state absorb radiation, then it must be finally in 2s state.
    (d) The virial theorem corresonding to H-atom is 2×total energy = – <potential energy)

13. The ***incorrect*** statement is

    (a) The degeneracy corresponding to Li^{++} species having energy $-\dfrac{e^2}{72\pi \in_0 a_0}$ is 9

    (b) The degeneracy corresponding to rotating a particle of mass 'm' having energy $\dfrac{5h^2}{2\pi^2 mr^2}$ is 7

    (c) The energy corresponding to particle confined to move in 2D square box having energy $\dfrac{25h^2}{4\ell^2}$ is 2

    (d) The negative value of energy eigenvalue $E\left(= \dfrac{-13.6z^2}{n^2} \right)$ corresponds to scattering states in which there is not enough energy for the electron to escape from the nucleus

South Delhi: 28-A/11, Jia Sarai, Near-IIT Hauz Khas, New Delhi-16, Ph : 011-26851008, 26861009 www.careerendeavour.in

North Delhi: 33-35, First Floor, Mall Road, G.T.B. Nagar (Opp.- Metro Gate No. 3), Delhi-09, Ph: 011-65462244, 65662255

14. $\psi = N\,r\left(6 - Z\,r\right)e^{-Zr/3}\cos\theta$, is a proposed hydrogenic wavefunction, where Z = atomic number, r = radial distance from the nucleus, θ = azimuthal angle, N is a constant. The **CORRECT** statement about ψ is
    (a) $\psi = 0$ in the xy-plane
    (b) two radial nodes are presenet in ψ
    (c) one angular node is present in ψ
    (d) the size of the orbital decreases with increase in atomic number

15. Among the following statements, which statements **TRUE** for a Hermitian operator are :
    (a) The eigen values are real
    (b) the eigen functions are orthogonal
    (c) The represent observables
    (d) The scalar product of two different eigen function is equal to one

PART- C

16. The wavelength associated with an electron moving with a velocity of $10^3\,\mathrm{m\,sec^-}$ _____ $(-10^{-7}\,\mathrm{m})$.

17. The degenracy of the energy level $\dfrac{12h^2}{8ml^2}$ of a particle in a three dimensional cube of the length 'a' is _____

18. In the units of $\dfrac{h^2}{8ml^2}$, the energy difference between levels corresponding to 3 to 2 node eigen functions for a particle of mass m in a one dimensional box of length 'ℓ' is _____

19. For unnormalized wave-function, $\psi\left(r,\theta,\phi\right) = \sin\theta\cos\phi\left(\dfrac{2r}{a_0} - \left(\dfrac{r}{a_0}\right)^2\right)\exp\left(-\dfrac{r}{a_0}\right)$, the number of radial node(s) is _____

20. The wavelength of an electron accelerated through a potential of 100 kV is _____ (Å)

21. The probability of finding the particle in one dimensional box of length L in the region between $\dfrac{L}{4}$ and $\dfrac{3L}{4}$ for quantum number n = 2 is _____ %

22. The ground state translational energy of a particle in one-dimensional box of 300pm length is about 4 eV. Suppose that the same particle is moving in a three-dimensional cubic box of 100 pm on the side. The ground state energy of the particle in the three-dimensional box is _____ (eV).

23. A cubic box of edge-length 1.2 nm contains 10 electrons. Applying the simple particle in a box theory, the value of ΔE for the first excited state of this system is _____ $(10^{-20}\,\mathrm{J})$

24. For a particle of mass m confined in a box of length L, assume $\Delta x = L$. Assume further that $\Delta p(\min) = \left\langle p^2\right\rangle^{1/2}$. Use the uncertainity principle to obtain an estimate of the energy of the particle. The value will be _____ $\left(\dfrac{\hbar^2}{mL^2}\right)$.

25. The ground state energy of hydrogen atom is –13.598 eV. The expectation values of kinetic energy, $\left\langle T\right\rangle$ is _____ (in units of eV).
