## PAPER: IIT-JAM 2006 BIOTECHNOLOGY-BT

## **INSTRUCTIONS:**

(a) Only Q

(c) Only R

|            | I ISTRECTIONS.   |   |  |  |
|------------|--|---|--|--|
| (i)        |  |   |  |  |
| (ii)       |  |   |  |  |
| (iii)      |  |   |  |  |
| (iv)       |  |   |  |  |
| <b>(v)</b> | Multiple answers to a question will be treated as a wrong answer.  |   |  |  |
| (vi)       | For each un-attempted question, you wil  | l be awarded <b>0</b> (zero) mark.                          |  |  |
|            |  |   |  |  |
| 1.         | Lysine is an amino acid with three ionizable groups. These are the $\alpha$ -COOH, $\alpha$ -amino and $\epsilon$ -  |   |  |  |
|            | lysine is  | .2 and 10.8, respectively. The isoelectric point (pI) for   |  |  |
|            | (a) 5.7 (b) 6.5  | (c) 9.2 (d) 10.0  |  |  |
| 2          |  |   |  |  |
| 2.         | reactions?   | participates as cofactors in a cellular oxidation-reduction |  |  |
|            | (a) Pyridoxine and folate  | (b) Riboflavin and cobalamine                               |  |  |
|            | (c) Ascorbate and nicotinamide   | (d) Thiamine and pantothenate                               |  |  |
| 3.         | Erythrocyte glucose transporter specifically transports glucose down its concentration gradient and  |   |  |  |
|            | exhibits hyperbolic saturation kinetics. This is an example of   |   |  |  |
|            | (a) Active mediated transport  | (b) Passive mediated transport                              |  |  |
|            | (c) Non-mediated transport   | (d) Group translocation                                     |  |  |
| 4.         | The oligosaccharide part of glycoproteins is either N-linked or O-linked. The amino acid residues through which these oligosaccharides are attached to polypeptide are |   |  |  |
|            | (a) Asn and Thr (b) Asp and  |   |  |  |
| 5.         | · · · · · · · · · · · · · · · · · · ·  | ents required to set up a polymerase chain reaction from    |  |  |
|            | the following  |   |  |  |
|            | (a) Template DNA, two primers, dNTPs and DNA ligase  |   |  |  |
|            | (b) Template DNA, two primers, NTPs and DNA ligase   |   |  |  |
|            | (c) Template RNA, two primers, NTPs and DNA polymerase   |   |  |  |
|            | (d) Template DNA, two primers, dNTPs and DNA polymerase  |   |  |  |
| 6.         | The DNA restrictions site recognized by the enzyme $Hind$ III is - $\frac{AAGCTT}{TTCGAA}$ . Which of the  |   |  |  |
|            | following sequence contained in a double stranded DNA is cut by Hind III?  |   |  |  |
|            | (P) ATGCCTTAAGATGC   | (Q) ATGCTTCGAAATGC  |  |  |
|            | (R) ATGCAAGCTTATGC   | (S) ATGCGAATTCATGC  |  |  |

(b) Both Q and R

(d) All of them

| 1.  | time was 30 min, what was the initial population number in this culture?  |  |  |  |
|-----|---|--|--|--|
|     | (a) $20 \times 10^4$ cells  | (b) $10 \times 10^5$ cells                         |  |  |
|     | (a) $20 \times 10^{5}$ cells  | (d) $16 \times 10^6$ cells                         |  |  |
| 8.  | ` '   |  |  |  |
| 0.  | The correct match between <b>Group I</b> and <b>Group II</b> is <b>Group I</b> Group II   |  |  |  |
|     | -   | ntaga inhihition                                   |  |  |
|     | 1   |  |  |  |
|     | <ul><li>Q. Azidothymidine (AZT)2. Sterol binding and disruption of membrane permeability</li><li>R. Nalidixic acid</li><li>3. Blocks glycosylation</li></ul>                                  |  |  |  |
|     |   |  |  |  |
|     | S. Tunicamycin 4. DNA gyrase inh  |  |  |  |
|     | (a) P-2, Q-1, R-4, S-3  | (b) P-1, Q-4, R-3, S-2                             |  |  |
| 0   | (c) P-4, Q-1, R-3, S-2  | (d) P-3, Q-2, R-4, S-1                             |  |  |
| 9.  | Most accurate method to determine the molecul   |  |  |  |
|     | (a) Gel permeation chromatography   | (b) SDS-PAGE                                       |  |  |
|     | (c) Analytical ultracentrifugation  | (d) MALDI-TOF mass spectroscopy                    |  |  |
| 10. | The quantity of bacteriophages in a given sample is best given as   |  |  |  |
|     | (a) Colony forming units (CFU)  | (b) Minimum inhibitory concentration (MIC)         |  |  |
|     | (c) Plaque forming units (PFU) (d) Lethal dose 50% (LD <sub>50</sub> )  |  |  |  |
| 11. | Inter-conversion of glucose and fructose occurs with an equilibrium constant of 1.0. Glucose isomerase catalyzes this reaction. The final concentration of fructose at equilibrium from 40 mM |  |  |  |
|     | glucose is  | · ·  |  |  |
|     | (a) 40 mM (b) 20 mM   | (c) 10 mM (d) 0 mM                                 |  |  |
| 12. | Cori cycle integrates body metabolism to  |  |  |  |
|     | (a) resynthesize glucose from lactate in the liver  |  |  |  |
|     | (b) oxidize acetyl CoA in the muscle  |  |  |  |
|     | (c) generate urea in the kidney EEP ENDEAVOIR   |  |  |  |
|     | (d) generate glucose from acetyl CoA in the liver   |  |  |  |
| 13. | In a molecule of glycogen we find   |  |  |  |
|     | (a) one reducing end and one non-reducing end   |  |  |  |
|     | (b) many reducing ends and one non-reducing end   |  |  |  |
|     | (c) one non-reducing end and many branch points   |  |  |  |
|     | (d) one reducing end and many non-reducing ends   |  |  |  |
| 14. | ABO blood group classification is based on the s  | urface antigen of erythrocytes. The nature of this |  |  |
|     | antigen is  |  |  |  |
|     | (a) peripheral membrane protein   | (b) integral membrane protein                      |  |  |
|     | (c) sphingoglycolipid   | (d) glycoprotein                                   |  |  |
| 15. | The citric acid cycle is a metabolic device to oxidize acetyl CoA and conserve the liberated free   |  |  |  |
|     | energy for ATP generation. In this cycle there are  |  |  |  |
|     | (a) two decarboxylations and two oxidations   | (b) two decarboxylations and four oxidations       |  |  |
|     | (c) one decarboxylation and three oxidations  | (d) one decarboxylation and one oxidation          |  |  |

PAPER : IIT-JAM 2006

| 16.   | In an enzyme catalyzed reaction, doubling the amount of enzyme leads to a change in which of the following?   |   |  |               |
|---|---|---|--|---------------|
|   | (a) $V_{max}$ (b) $k_{cat}$   | (c) $k_{cat}/K_{m}$ (d) $K_{m}$               |  |               |
| 17.   | Growing E. coli cells, when shifted from 37°C t   |   |  |               |
|   | modifying the following parameters.   |   |  |               |
|   | (a) Fatty acid chain length and sterol content  | (b) Fatty acid chain length and unsaturation  |  |               |
|   | (c) Fatty acid unsaturation and sterol content  | (d) E. coli cannot maintain membrane          |  |               |
|   | fluidity  |   |  |               |
| 18.   | Discharge of proton concentration gradient across membrane is coupled to the formation of ATP from ADP and increasing phasehote. This process accurs in which of the following? |   |  |               |
|   | from ADP and inorganic phosphate. This process occurs in which of the following?  P. Oxidative phosphorylation  |   |  |               |
|   |   |   |  |               |
|   | <ul><li>Q. Substrate level phosphorylation</li><li>R. Photophosphorylation</li></ul>  |   |  |               |
|   | S. Protein phosphorylation  |   |  |               |
|   | (a) Q and S (b) Q and R   | (c) P and Q (d) P and R                       |  |               |
| 19.   | Forging of an ecosystem on which of the following   |   |  |               |
| 17.   | P. Freshwater lake Q. Bare rock   | R. Sand-dune S. Abandoned field               |  |               |
|   | (a) P, R, S (b) P, Q, S   | (c) P, Q, R (d) Q, R, S                       |  |               |
| 20.   | Gardeners pinch off the tips of plants to stimulate   |   |  |               |
| 20.   | is implicated in this phenomenon?   | their side growth. Which one of the following |  |               |
|   | (a) Abscisic acid (b) Auxin   | (c) Cytokinin (d) Gibberellin                 |  |               |
| 21.   | Pure plasmid DNA was isolated from a bacterium. Restriction enzyme digestion of this plasmid  |   |  |               |
|   | with either Bam HI or Eco RI resulted in two DNA fragments. A double digestion of the same  |   |  |               |
|   | plasmid with both these enzymes resulted in three DNA fragments. From this we can conclude that the isolated plasmid DNA is   |   |  |               |
|   | (a) Double stranded and linear (b) Double stranded and circular   |   |  |               |
|   | (a) Double stranded and linear (b) Double stranded and circular (c) Single stranded and linear (d) Single stranded and circular   |   |  |               |
| 22.   | The taxonomic resolution between Archaea and E by Carl Woese  | ubacteria was highlighted using the following |  |               |
|   | (a) Serological techniques  | (b) Protein electrophoresis patterns          |  |               |
|   | (c) Gram staining   | (d) rRNA studies                              |  |               |
| 23.   | Which one of the following statements is true wit   | h regard to the nature of viroids and prions? |  |               |
|   | (a) Viroids and DNA and prions are RNA  | (b) Viroids are protein and prions are RNA    |  |               |
|   | (c) Viroids are RNA and prions are protein  | (d) Both are made of protein                  |  |               |
| 24.   | How many types of leukocytes are present in the   | mammalian circulatory system?                 |  |               |
|   | (a) Two (b) Three   | (c) Four (d) Five                             |  |               |
| 25. Choose the combination of statements that are correct for the cerebrum of the l   |   |   |  |               |
|   | P. It is the largest part of brain  |   |  |               |
|   | Q. Controls the pituitary hormone secretion   |   |  |               |
| <ul><li>R. Involved in coordinating the movements of the body</li><li>S. Receives and processes the sensory information</li></ul> |   |   |  |               |
|   |   |   |  | (a) PQ (b) QR |

| 26. | The synthesis of proteins requires 20 standard amino acids in the living systems. However, some organisms use selenocysteine as an additional amino acid for synthesizing proteins. Selenocysteine is biosynthesized from     |   |  |  |  |
|-----|---|---|--|--|--|
|     | (a) Cysteine (b) Serine   | (c) Threonine (d) Proline   |  |  |  |
| 27. | conditions, resulted in a 40 kDa protein. The endoplasmic reticulum resulted in a 36 kDa protein two polypeptides is due to the loss of a   | en translated using free ribosome under <i>in vitro</i> e same mRNA when translated using the rough tein. The difference in the molecular weight of the |  |  |  |
|     | (a) 2 kDa peptide from N-terminus and a 2 kDa peptide from the C-terminus   |   |  |  |  |
|     | (b) 1 kDa peptide from N-terminus and a 3 kDa peptide from the C-terminus   |   |  |  |  |
|     | (c) 4 kDa peptide from the N-terminus   |   |  |  |  |
|     | (d) 4 kDa peptide from the C-terminus   |   |  |  |  |
| 28. | Which of the following can be used for transfe  |   |  |  |  |
|     | P. Transformation   | Q. Sonication   |  |  |  |
|     | R. Transfection   | S. Electroporation  |  |  |  |
|     | (a) Only P can be used  | (b) Only Q and R can be used  |  |  |  |
|     | (c) Only Q, R and S can be used   | (d) Only P, R and S can be used   |  |  |  |
| 29. | Choose the statement that is NOT correct for the cytoskeletal protein actin   |   |  |  |  |
|     | (a) $\alpha$ -actins are found in various types of muscles  |   |  |  |  |
|     | (b) Polymerization of pure actin in vitro requi   |   |  |  |  |
|     | (c) Actin filaments have a slow growing minus end and a fast growing plus end   |   |  |  |  |
|     | (d) Cytochalasins are the inhibitors for actin polymerization   |   |  |  |  |
| 30. | Mast cells contain vesicles that store large amounts of histamine. After staining with eosin, these vesicles are stained red in colour. Identify which of the following interactions is involved between histamine and eosin? |   |  |  |  |
|     | (a) Hydrophobic interaction (b) Electrostatic interaction   |   |  |  |  |
|     | (c) Covalent bonding (d) Hydrogen bonding   |   |  |  |  |
| 31. | A culture of the Bacillus brevis when transferred to moisture free conditions   |   |  |  |  |
|     | (a) utilizes glucose as the only carbon source  |   |  |  |  |
|     | (b) undergoes division thus increasing it's number  |   |  |  |  |
|     | (c) undergoes sporulation   |   |  |  |  |
|     | (d) all of the above are observed   |   |  |  |  |
| 32. | The purification of an antigen using the corresponding antibodies conjugated to agarose is an example of  |   |  |  |  |
|     | (a) Affinity chromatography   | (b) Gel filtration chromatography   |  |  |  |
|     | (c) Ion exchange chromatography   | (d) Hydrophobic interaction chromatography  |  |  |  |
| 33. | Choose the correct match from A, B, C and D   |   |  |  |  |
|     | Group I   | Group II  |  |  |  |
|     | P. 5' capping of mRNA   | 1. 5-methyl guanosine   |  |  |  |
|     | Q. Ribozyme   | 2. Polyadenylate transferase  |  |  |  |
|     | R. Promoter   | 3. Spliceosome  |  |  |  |
|     | S. Poly-(A) <sup>+</sup> tail   | 4. 7-methyl guanosine   |  |  |  |

| R. Involved in presenting antigen to cytotoxic T cells  |  |  |  |  |
|---|--|--|--|--|
|   |  |  |  |  |
|   |  |  |  |  |
|   |  |  |  |  |
|   |  |  |  |  |
| o can be  |  |  |  |  |
|   |  |  |  |  |
|   |  |  |  |  |
|   |  |  |  |  |
| Which of the following statements is FALSE for the nitric oxide gas?  (a) An intracellular signaling molecule                               |  |  |  |  |
|   |  |  |  |  |
| <ul><li>(b) Deamination of histidine results into nitric oxide production</li><li>(c) Stimulates guanylyl cyclase to produce cGMP</li></ul> |  |  |  |  |
|   |  |  |  |  |
|   |  |  |  |  |
| G-proteins are involved in relaying signals through G-protein linked receptors. Which of the  |  |  |  |  |
| following forms of G-protein is considered to be in active state?  (a) G-protein - ADP  (b) G-protein - ATP                                 |  |  |  |  |
|   |  |  |  |  |
|   |  |  |  |  |
|   |  |  |  |  |
|   |  |  |  |  |
|   |  |  |  |  |
|   |  |  |  |  |

S. Luteinizing hormone

- 4. Glycogen breakdown
  - 5. Thyroid hormone synthesis
- 6. Progesterone secretion
- (a) P-1, Q-2, R-5, S-6 (b) P-5, Q-6, R-1, S-2
- (c) P-5, Q-2, R-3, S-4
- (d) P-4, Q-3, R-1, S-6
- 41. The 'A' fragment of diphtheria toxin catalyzes the addition of an ADP-ribose group to the eukaryotic elongation factor EF-2. The source for the ADP-ribose group is
  - (a) FAD

- (b) FMN
- (c) NAD<sup>+</sup>
- (d) NADP<sup>+</sup>
- 42. The nucleotide sequence of DNA involved in binding to a transcription factor can be determined by
  - (a) DNA footprinting

(b)  $S_1$  nuclease treatment

(c) DNA fingerprinting

- (d) Northern hybridization
- 43. A culture of *Mycobacterium leprae* was subjected to alkaline ethanol extraction prior to acid fast staining. The colour of the culture following staining will be
  - (a) Red

- (b) Green
- (c) Yellow
- (d) Blue
- 44. The primer of the lagging strand during DNA replication is removed by
  - (a) 3' to 5' exonuclease activity of DNA polymerase III
  - (b) DNA primase
  - (c) 5' to 3' exonuclease activity of DNA polymerase I
  - (d) 3' to 5' exonuclease activity of DNA polymerase I
- 45. Compare the CH<sub>3</sub>-C bond lengths in propene with that of ethane
  - (a) bond length shorter in propene
- (b) bond lengths are equal
- (c) bond length longer in propene
- (d) bond lengths cannot be compared
- 46. 2, 4-Dimethylcyclobutane-1, 3-dicarboxylic acid is optically inactive because it has

- (a) plane of symmetry
- (b) centre of symmetry
- (c) the capability of rotating plane polarized light
- (d) neither a plane nor a centre of symmetry
- 47. Compare the pK<sub>a</sub> values of the following acids:
  - (i) formic acid

(ii) acetic acid

(iii) monochloroacetic acid

(iv) dichloroacetic acid

(a) (iv) < (iii) < (i) < (ii)

(b) (i) > (ii) > (iii) > (iv)

(c) (i) < (ii) < (iii) > (iv)

(d) (iv) < (iii) < (i) < (ii)

| 48.  | Excess Br <sub>2</sub> water reacts with salicylic acid: predict the product  |                          |                                 |   |

58. Consider the cyclic process ABCA on a sample of 2.0 mol of an ideal gas as shown in figure.

The temperatures of the gas at A and B are 300 K and 500 K, respectively. A total of 1200 J heat is withdrawn from the sample in the process. Find the work done by the gas in part BC (R = 8.3 J/mol-K)

- (a) 4520 J
- (b) 0

- (c) -4520 J
- (d) -9000 J
- 59. If heat is supplied to an ideal gas in an isothermal process
  - (a) the gas will do positive work

- (b) the internal energy of the gas will increase
- (c) the gas will do negative work
- (d) the said process is not possible
- 60. The flow of solvent molecules from pure solvent side to the solution side takes place during osmosis. This causes a decrease in the difference of chemical potential of solvent on either side
  - (a) hydrostatic pressure increases on either sides
    - (b) false
  - (c) chemical potential has no role to play
- (d) true
- 61. The ionization energy of a hydrogen atom is 13.6 eV. The first excitation potential of the hydrogen atom is
  - (a) higher than 13.6 eV

(b) lower than 13.6 eV

(c) same

- (d) twice the ionization energy
- 62. Under standard condition can  $KMnO_4$  produce  $O_2$  from water in the presence of a mineral acid? (Given half cell potential 1.51 V for  $MnO_4^-/Mn^{2+}$  and  $O_2/H_2O$  in acid 1.22 V)
  - (a) the reaction is not possible

(b) the reaction needs air

(c) the reaction is possible

- (d) the reaction needs photon
- 63. The hydrolysis of ethyl acetate by acetic acid produced in the reaction also catalyzes the reaction. If the initial concentration of ethyl acetate is 'a' and that of acetic acid is 'b' and 'x' is the amount of ethyl acetate hydrolyzed at time 't'. The rate of reaction will be
  - (a) k(a+x)(b+x)

(b) k(a-x)(b+x)

(c) k(a-x)(b-x)

- (d) k(a+x)(b-x)
- 64. On passing monochromatic light through a 0.04 molar solution in a cell of 1cm path length, the intensity of the transmitted light was reduced to 50%. Calculate the molar extinction coefficient of the solute in the solution (given log 2 = 0.3010).
  - (a)  $0.75 \text{ liter } \text{mol}^{-1} \text{ cm}^{-1}$

(b) 75 liter mol<sup>-1</sup> cm<sup>-1</sup>

(c) 750 liter mol<sup>-1</sup> cm<sup>-1</sup>

(d) 7.5 liter mol<sup>-1</sup> cm<sup>-1</sup>

- 65. Kilowatt-hour is the unit of
  - (a) Power
- (b) Energy
- (c) Current
- (d) Voltage
- 66. The dimensional formula of surface tension in terms of the dimensions of mass (M), length (L) and time (T) is
  - (a)  $MT^{-2}$

- (b) MLT<sup>-2</sup>
- (c)  $MT^{-1}$
- (d)  $ML^{-1}T^{-2}$

(b) Gamma rays travel through vacuum

(d) 48 m/s

(d) 4:1

(d) Sound waves travel through solids

A body moves from A to B in a straight line with a uniform speed of 60 m/s and returns to B

Two particles have their masses and the kinetic energies **both** in the ratio 1:2. Then the ratio

(c) zero

(c) 2:1

with a uniform speed of 40 m/s. The average speed of the body for the complete motion is

Which of the following statements is FALSE?

(b) 45 m/s

(b) 1:4

(a) Light rays travel through vacuum

(c) Sound waves travel through vacuum

of their de Broglie wavelengths will be

67.

68.

69.

(a) 50 m/s

(a) 1:2

| 70.   | Four equal resistances are connected in such a way that they form a square loop. If the value of each resistance is $R_i$ the resistance between any two diagonally opposite points will be  |  |                              |                                    |

- The component (value) which is independent of x in the expansion of  $\left(1+\sqrt{x}+\frac{1}{\sqrt{x}}\right)^4$  is: 88.
  - (a) 7

(b) 12

- The area of the region bounded by the circle  $x^2 + y^2 = a$ , (a > 0) and between the lines  $x = -\frac{a}{2}$ 89.

and  $x = \frac{a}{2}$  is

## CAREER ENDEAVOUR

(a) 
$$a^2 \left( \frac{\pi}{3} - \frac{\sqrt{3}}{2} \right)$$

(b) 
$$a^2 \left( \frac{\pi}{3} + \frac{\sqrt{3}}{2} \right)$$

$$(c) \quad \frac{a^2}{2} \left( \frac{\pi}{3} - \frac{\sqrt{3}}{2} \right)$$

(a) 
$$a^2 \left( \frac{\pi}{3} - \frac{\sqrt{3}}{2} \right)$$
 (b)  $a^2 \left( \frac{\pi}{3} + \frac{\sqrt{3}}{2} \right)$  (c)  $\frac{a^2}{2} \left( \frac{\pi}{3} - \frac{\sqrt{3}}{2} \right)$  (d)  $\frac{a^2}{2} \left( \frac{\pi}{3} + \frac{\sqrt{3}}{2} \right)$ 

- If  $S = \sum_{n=0}^{\infty} \left(\frac{r}{a}\right)^n \cos^n \theta$ , which of the following statements is TRUE 90.
  - (a)  $S = \frac{r}{a \cos \theta + r}$ , if  $(r, \theta)$  are the polar coordinates such that r < a
  - (b)  $S = \frac{r}{a \cos \theta + r}$ , if  $(r, \theta)$  are the polar coordinates such that r > a
  - (c)  $S = \frac{r}{a \sec \theta r}$ , if  $(r, \theta)$  are the polar coordinates such that r < a
  - (d)  $S = \frac{r}{a \cos \theta}$ , if  $(r, \theta)$  are the polar coordinates such that r > a

- Let  $\alpha$  and  $\beta$  be two real numbers satisfying  $a\cos\theta + b\sin\theta = c$ , where a,b and c are three real 91. constants. Also  $\alpha - \beta \neq 2n\pi$ , (n is an integer). The value of  $\sin(\alpha + \beta)$  is:
  - (a)  $\frac{2ab}{a^2 + b^2}$
- (b)  $\frac{ab}{a^2 + b^2}$  (c)  $\frac{2ab}{a^2 b^2}$  (d)  $\frac{a^2 b^2}{a^2 + b^2}$
- 92. If the point (x, y) = (2, 4) minimizes Z = 6x + 10y subject to the constraints  $2x + y \ge 4$ ,  $x+2y \ge 10$ ,  $x+y \ge 6$ , then which of the given constraints does NOT effect the minimization point (2, 4) in minimizing Z = 6x + 10y.
  - (a) no constraint can be omitted

- $x + 2y \ge 10$

(c)  $x + y \ge 6$ 

- (d)  $2x + y \ge 4$
- $\alpha = \frac{i-1}{\cos\frac{\pi}{2} + i\sin\frac{\pi}{2}}$  is one of the roots of the quadratic equation  $x^2 + bx + c = 0$ , where b and c are 93.

real constants. The value of b is:

- (a)  $1 \sqrt{3}$
- (b)  $\sqrt{3}-1$
- (c)  $\frac{1-\sqrt{3}}{2}$  (d)  $\frac{\sqrt{3}-1}{2}$
- 94. Let f be a function given by f(x) = x - [x], where  $x \in \Re$  and [x] is the greatest integer defined as [x] = n for all  $n \le x < n+1$ . Then which of the following statements is TRUE:
  - (a) f is discontinuous at all integer values
  - (b) f is continuous everywhere
  - (c) f is discontinuous at all integer values except at '0'
  - (d) f is discontinuous only at positive integer values
- Let a,b,c,d and e be real and non-zero. For the given matrix  $A = \begin{pmatrix} a & 0 & b \\ 0 & c & 0 \\ d & 0 & c \end{pmatrix}$  which of the 95.

following statements is TRUE:

- (a) Matrix A is non-singular for all distinct a,b,c,d and e
- (b) The minor of every element of A is equal to the cofactor of the corresponding element
- (c) The number of non-zero elements of the matrix  $\frac{1}{2}(A-A^T)$  is 5
- (d) The matrix  $\frac{1}{2}(A-A^T)$  is symmetric
- Given  $x \ln(x) \frac{dy}{dx} y = 0, (x > 0), y(e) = e$ , then y(4) is 96.
  - (a) ln(4)
- (b)  $e \ln(4)$
- (c)  $e^2 \ln(4)$
- (d)  $e^4 \ln(4)$

- Let  $f(x) = \begin{cases} \frac{e^{\cos x} \sin x}{1 + x^2} & \text{for } |x| < 2\\ xe^{x-2} & \text{otherwise} \end{cases}$ . The value of the integral  $\int_{-2}^{4} f(x) dx$  is: 97.
  - (a)  $1-3e^2$
- (b)  $3e^2 + 1$
- (c)  $3e^2 1$  (d)  $3e^2$
- If y is a function of x defined as  $y = a^x + \frac{1}{a^x + \frac{1}{a^x + \dots}}$ . The derivative of y with respect to x is: 98.
  - (a)  $\frac{ya^x \ln a}{2v + a^x}$
- (b)  $\frac{ya^x \ln a}{2y a^x}$  (c)  $\frac{ya^x \ln a}{2(y a^x)}$  (d)  $\frac{ya^x \ln a}{2(y + a^x)}$
- Let A, B, C and D be four points in a vertical line such that  $AB = \frac{1}{3}BC = \frac{1}{5}CD$ . If a body falls 99. from rest from A, the ratio of the times of descending AB, BC and CD is:
  - (a) 1:4:9
- (b) 1:3:5
- (c) 1:2:3
- (d) 1:1:1
- The resultant of two forces of 20N and 40N is acting vertically at 'O' as shown in the following 100. figure. If the angle XOP is 30°, then the angle X'OQ is:
