

## D.U. M.Sc. ENTRANCE EXAMINATION PHYSICS-2018

- A particle is confined in a one dimensional potential box with impenetrable walls at  $x = \pm a$ . Its energy eigenvalue is 2 eV and corresponds to the eigenfunction of the first excited state. The lowest possible energy of the particle is  
 (a) 2.0 eV (b) 0.5 eV (c) 4.0 eV (d) 1.0 eV
- The net magnetic moment of Iron atom in BCC crystal ( $a = 2.857 \text{ \AA}$ ) is  $2.2 \mu_s$  ( $\mu_s = 9.273 \times 10^{-24} \text{ Am}^2$ ). The saturation magnetization of Fe at 0 K is  
 (a)  $1750 \text{ Am}^{-1}$  (b)  $1750 \text{ Am}^{-2}$  (c) 0 (d)  $1749.6 \text{ kAm}^{-1}$
- Three dice are thrown simultaneously. The probability that the same number will appear on all the three dice is  
 (a)  $1/36$  (b)  $1/6$  (c)  $1/18$  (d)  $1/108$
- Let us model a star as a spherical black body at temperature T which radiates to distant points which are at absolute zero. Let us further model a dust cloud around the star as a black spherical shell whose temperature  $T_s$  is determined by radiative equilibrium. What is  $T_s$ ?  
 (a)  $2^{-1/2} T$  (b)  $2^{-1/4} T$  (c) T (d)  $T/2$
- Consider a Carnot reversible heat engine working between the temperatures of melting ice and steam. The efficiency of this heat engine will be approximately equal to  
 (a) 37% (b) 27% (c) 100% (d) None of the above
- Which one of the following is not a characteristic of CMOS configuration?  
 (a) CMOS devices have higher noise-margins.  
 (b) CMOS devices have low input impedances.  
 (c) CMOS devices have much lower transconductance than bipolar devices  
 (d) CMOS devices dissipate lower static power than bipolar devices
- the value of the integral  

$$\int_0^{2\pi} \frac{d\theta}{(5 - 3\sin \theta)}$$
  
 (a)  $2\pi/3$  (b)  $\pi/2$  (c)  $\pi/4$  (d)  $3\pi/4$
- Given  $z = x + iy$ , the contour integration  $\oint_C \frac{dz}{z}$  is equal to (where C is any anti-clockwise contour going around the origin)  
 (a)  $-\pi i$  (b)  $2\pi i$  (c)  $\pi i$  (d) 0
- Solution of the differential equation  

$$\frac{d^2 y}{dx^2} - 6 \frac{dy}{dx} + 9y = 8e^x$$
 is  
 (a)  $Axe^{3x} + Be^x$  (b)  $(Ax + B)e^{3x} + 2e^x$   
 (c)  $(Ax^2 + Bx)e^{4x} + 2e^{2x}$  (d)  $(Ax + B)e^{3x} + 8e^x$

10. Train A and B are running on adjacent rail tracks in the same direction with speeds 43 m/s and 10 m/s, respectively, with train B ahead of train A. When train A is 1000 m behind train B, train A sounds a whistle with frequency 270 Hz in its rest frame. Assuming still air and a speed of sound of 330 m/s, the frequency of the sound as measured by a passenger at rest in train B is equal to  
 (a) 301 Hz (b) 280 Hz (c) 310 Hz (d) 290 Hz
11. An Earth-like exoplanet orbits around a star having a mass  $1/27$  times the mass of Sun. This exoplanet completes one revolution around the star in 365 days just like Earth. Assuming that orbits of both Earth as well as this exoplanet are circular, the distance of the exoplanet from star is  
 (a) one-ninth of the Earth-sun distance (b) 3 times the Earth-Sun distance  
 (c) same as the Earth-Sun distance (d) One-third of the Earth-Sun distance
12. Consider eight electrons in a one dimensional box of length 'a' extending from  $x = 0$  to  $x = a$ . What is the minimum allowed total energy using Pauli's exclusion principle for the system ( $m$  = mass of electron)  
 (a)  $\frac{8h^2}{ma^2}$  (b)  $\frac{15h^2}{2ma^2}$  (c)  $\frac{15h^2}{4ma^2}$  (d)  $\frac{10h^2}{ma^2}$
13. For an electromagnetic wave travelling in free space, given by  $\vec{E} = E_m \sin(\omega t - \beta z) \hat{y}$ , the magnetic field  $\vec{B}$  will be given by  
 (a) None of the above (b)  $\vec{B} = -\frac{E_m \beta}{\omega} \sin(\omega t - \beta z) \hat{x}$   
 (c)  $\vec{B} = -\frac{E_m \beta}{\omega} \cos(\omega t - \beta z) \hat{z}$  (d)  $\vec{B} = \frac{E_m \beta}{\omega} \sin(\omega t - \beta z) \hat{y}$
14. The magnetic field required to bend a non-relativistic charged particle moving with velocity  $v$  into an arc of radius of curvature  $R$  is  
 (a) inversely proportional to  $v^2$  and directly proportional to  $R^2$   
 (b) inversely proportional to  $v$  and directly proportional to  $R$   
 (c) directly proportional to  $v$  and inversely proportional to  $R$   
 (d) directly proportional to  $v^2$  and inversely proportional to  $R^2$
15. A atom is placed in a magnetic field of sufficient strength for splitting the 3p level. The number of levels resulting due to splitting will be  
 (a) 1 (b) 4 (c) 3 (d) 2
16. In 3-dimensional space, a particle of mass  $m$  moves in a potential  $B \sin 2\alpha r$  where  $r$  is the distance of the particle from the origin,  $B$  and  $\alpha$  are real constants. Which of the following statement is correct?  
 (a) The motion is periodic in  $r$  with an oscillation length scale  $2\pi/\alpha$ .  
 (b) The trajectory of the particle is always confined to a plane passing through the origin.  
 (c) The motion is periodic in  $r$  with an oscillation length scale  $\pi/\alpha$ .  
 (d) Symmetry implies that a radial momentum  $p_r$  is conserved because of the periodic nature of the potential.
17. Fourier transform of any function  $f(x)$  is defined to be

$$F(k) = \frac{1}{\sqrt{2\pi}} \int_{-\infty}^{\infty} f(x) \exp(-ikx) dx$$

Then, given a function  $g(x) = 1$  for  $|x| < 1$  and zero otherwise, its Fourier transform  $G(k)$  is

- (a)  $\sqrt{\frac{2}{\pi}} \frac{\sin(k)}{k}$  (b)  $\sqrt{\frac{1}{\pi}} \frac{\exp(k)}{k}$  (c)  $\sqrt{\frac{2}{\pi}} \cos(k)$  (d)  $\sqrt{\frac{1}{\pi}} \frac{\exp(-k)}{k}$

18. The fine structure splitting of the 2p state of carbon and oxygen atoms in the L-S coupling scheme will have the energy respectively as  
 (a)  ${}^3P_2 > {}^3P_1 > {}^3P_0$  and  ${}^3P_2 > {}^3P_1 > {}^3P_0$  (b)  ${}^3P_2 < {}^3P_1 < {}^3P_0$  and  ${}^3P_2 < {}^3P_1 < {}^3P_0$   
 (c)  ${}^3P_2 > {}^3P_1 > {}^3P_0$  and  ${}^3P_2 < {}^3P_1 < {}^3P_0$  (d)  ${}^3P_2 < {}^3P_1 < {}^3P_0$  and  ${}^3P_2 > {}^3P_1 > {}^3P_0$
19. The Boolean expression  $(A + B)(A + \bar{B})(\bar{A} + B)$  is equivalent to  
 (a)  $A\bar{B}$  (b)  $\bar{A}B$  (c)  $\bar{A}\bar{B}$  (d)  $AB$
20. Consider a rotating spherical planet such that the effective gravitational attraction at the equator is only 75% of that at the pole. If the linear velocity of a point on the equator is  $v_0$ , what is the escape velocity for a polar particle?  
 (a)  $v_0\sqrt{8}$  (b)  $v_0\sqrt{2}$  (c)  $2v_0$  (d)  $4v_0$
21. If  $f(x)$  is a non-negative continuous function for all  $x$ , such that  $f(x) + f(x + 1/2) = 1, 0 \leq x \leq \frac{1}{2}$ , then  $\int_0^1 f(x)dx$  is equal to  
 (a) 1 (b) 1/4 (c) 1/2 (d) 2
22. A charged particle of charge  $q$  and mass  $m$  enters with initial velocity  $u$  along the  $x$  direction into a region defined by  $0 \leq x \leq L$  in which a uniform electric field  $\vec{E}$  is applied along the  $y$  direction. The charged particle gets deflected by distance  $D$  along the  $y$  direction when it emerges out of the region. Which of the following statements is false.  
 (a)  $D$  is directly proportional to  $u$  (b)  $D$  is directly proportional to  $q/m$   
 (c)  $D$  is directly proportional to  $L^2$  (d)  $D$  is directly proportional to  $\vec{E}$
23. Which of the following current densities can generate the magnetic vector potential  $\vec{A} = y^2\hat{x} + x^2\hat{y}$ ?  
 (a)  $-\frac{2}{\mu_0}(\hat{x} + \hat{y})$  (b)  $-\frac{2}{\mu_0}(\hat{x} - \hat{y})$  (c)  $\frac{2}{\mu_0}(x\hat{x} + y\hat{y})$  (d)  $\frac{2}{\mu_0}(x\hat{x} - y\hat{y})$
24. Let  $z = x + iy$  where  $x$  and  $y$  are real and  $i = \sqrt{-1}$ . The points  $(x, y)$  in the plane for which  $\frac{z+1}{z-i}$  is purely imaginary lie on  
 (a) a hyperbola (b) an ellipse (c) a circle (d) a straight line
25. Thermal runaway in a transistor biased in the active region is due to  
 (a) change in reverse collector saturation current due to rise in temperature  
 (b) breakdown under reverse biasing  
 (c) changes in  $\beta$  in which increases with temperature  
 (d) base-emitter voltage  $V_{BE}$  which decreases with rise in temperature
26. Life-time of an excited state of an atom that always jumps to the ground state by emitting a photon spontaneously is  $10^{-9}$  second. The frequency of the emitted photon is uncertain at least by an amount.  
 (a)  $10^4$  Hz. (b)  $10^8$  Hz. (c)  $10^5$  Hz. (d)  $10^6$  Hz.
27. In a hydrogen-like atom, an electron is bound to a heavy nucleus containing  $Z$  number of protons. In the framework of Bohr's atomic model,  $mv_n r_n = n\hbar, 1, 2, 3, \dots$ , where  $m, v_n$  and  $r_n$  are the electron's mass,

speed and radius, respectively, corresponding to the  $n$ -th orbit. If  $a_0 = \frac{\hbar^2}{me^2}$  then.

(a)  $v_n = \frac{ze^2}{n\hbar}$  and  $r_n = \frac{n^2}{z}a_0$

(b)  $v_n = \frac{ze^2}{n\hbar}$  and  $r_n = na_0$

(c)  $v_n = \frac{zne^2}{\hbar}$  and  $r_n = \frac{n}{z}a_0$

(d)  $v_n = \frac{e^2}{n\hbar}$  and  $r_n = \frac{n}{z}a_0$

28. Four moles of an ideal gas undergo a reversible isothermal compression at  $20^\circ\text{C}$  when 1850 J of work is done on the gas. The change in entropy of the gas in this process is

- (a)  $-1.6 \text{ J/K}$  (b)  $+1.6 \text{ J/K}$  (c)  $+6.3 \text{ J/K}$  (d)  $-6.3 \text{ J/K}$

29. The degeneracy of the lowest Landau level

- (a) Is constant with the magnetic field (b) Varies as function of temperature  
(c) Varies linearly with the magnetic field (d) Varies exponentially with the magnetic field

30. The fraction of electrons excited across the energy gap of Silicon ( $E_g = 1.1 \text{ eV}$ ) at room temperature (300 K) is

- (a)  $4 \times 10^{-12}$  (b)  $7 \times 10^{-18}$  (c)  $1.7 \times 10^{-12}$  (d)  $5.712 \times 10^{-10}$

31. A large and spherical soap film of thickness  $d$  has a refractive index  $4/3$ . A narrow beam of yellow light ( $\lambda = 6400 \text{ \AA}$ ) is incident on the film at an angle of  $30^\circ$ . What is the value of  $d$  for which a constructive second order interference would occur for the reflected wave?

- (a)  $4800 \text{ \AA}$  (b)  $3900 \text{ \AA}$  (c)  $5200 \text{ \AA}$  (d)  $5500 \text{ \AA}$

32. The real part of an analytic complex function is  $u(x, y) = x^2 - y^2$ . The imaginary part of the function is then

- (a)  $2xy$  (b)  $x^2 - y^2 - 2xy$  (c)  $x^2 + y^2$  (d)  $x^2 + y^2 + xy$

33. A uniformly charged ring of total charge  $Q$  and of radius  $R$ , rotate about an axis perpendicular to its plane and passing through its centre, with angular velocity  $\omega$ . The magnetic field produced at the centre of the ring is

- (a)  $\frac{3\mu_0 Q \omega}{2\pi R}$  (b)  $\frac{3\mu_0 Q \omega}{4\pi R}$  (c)  $\frac{\mu_0 Q \omega}{4\pi R}$  (d)  $\frac{\mu_0 Q \omega}{2\pi R}$

34. A child of mass  $3m$  sits on a swing, the base of which has mass  $m$ . While the rope (of length  $\ell$ ) has a negligible mass. An adult pulls back the swing (with the child) until the rope makes an angle of half-a-radian with the vertical, and then pushes with a force  $mg$  along the arc of a circle until the rope is exactly vertical, and release it. If the rope always taut, for how long did the adult push?

- (a)  $\pi \sqrt{\frac{2\ell}{3g}}$  (b)  $\frac{\pi}{3} \sqrt{\frac{\ell}{g}}$  (c)  $\sqrt{\frac{\ell}{g}}$  (d)  $\sqrt{\frac{2\ell}{3g}}$

35. The normalized wave functions  $\psi_1$  and  $\psi_2$  correspond to the ground state and the first excited states of a particle in a potential. The operator  $\hat{A}$  acts on the wavefunctions as  $\hat{A}\psi_1 = \psi_2$  and  $\hat{A}\psi_2 = \psi_1$ .

The expectation value of the operator  $\hat{A}$  for the state  $\psi = (3\psi_1 + 4\psi_2)/5$  is

- (a) 0 (b) 0.96 (c) 0.75 (d) 0.32

36. A particle of mass  $m$  is confined in the ground state of a one dimensional box extending from  $x = -2L$  to  $x = +2L$ . The wave function of the particle in this state is

$$\psi(x) = \psi_0 \cos\left(\frac{\pi x}{4L}\right),$$

where  $\psi_0$  is a constant. The energy eigenvalue corresponding to this state is

(a)  $\frac{\hbar^2 \pi^2}{32mL^2}$  (b)  $\frac{\hbar^2 \pi^2}{16mL^2}$  (c)  $\frac{\hbar^2 \pi^2}{4mL^2}$  (d)  $\frac{\hbar^2 \pi^2}{2mL^2}$

37. Let  $C$  be the unit circle, travelled counterclockwise. Evaluate

$$\oint_C \left[ (e^{-x^2} - y^3)dx + x^3 dy \right]$$

(a)  $\sqrt{\frac{\pi}{2}} - 2$  (b)  $\sqrt{\frac{\pi}{2}} + 2$  (c)  $2\pi$  (d)  $\frac{3\pi}{2}$

38. Consider a system of 3 non-interacting identical fermions. Each particle can be in any one of four states whose energies are  $-\varepsilon$ ,  $0$ ,  $+\varepsilon$  and  $+2\varepsilon$ . Find the entropy of the system if its total energy  $E = 0$ .

(a)  $k \ln 2$  (b)  $0$  (c)  $k \ln 3$  (d)  $k \ln 4$

39. A uniform magnetic field  $B$  points along the  $z$  axis. At time  $t = 0$ , a point charge  $q$  of mass  $m$  is released from the origin with a velocity  $\vec{v}$  making an angle  $30^\circ$  with the  $z$ -axis. When the point charge comes back again at  $x = 0$ , the  $z$ -coordinate of the charge is

(a)  $\frac{2\pi m |v|}{\sqrt{3}qB}$  (b)  $\frac{\sqrt{3}\pi m |v|}{2qB}$   
(c)  $\frac{\pi m |v|}{qB}$  (d)  $\frac{\pi m |v|}{2qB}$

40. A thin, uniform and rigid rod  $R$  of mass  $M$  and length  $L$  rests on a flat frictionless table top. A tiny piece of wood of mass  $m = 0.01M$  sliding on the table towards  $R$  with a velocity  $\vec{v}$  perpendicular to the length of the rod hits one end of  $R$  and gets stuck. The speed of the centre of mass and angular speed of the resulting system are respectively given by

(a)  $\frac{v}{100}$  and  $\frac{2v}{101L}$  (b)  $\frac{v}{101}$  and  $\frac{6v}{103L}$  (c)  $\frac{v}{101}$  and  $\frac{2v}{100L}$  (d)  $\frac{v}{100}$  and  $\frac{6v}{101L}$

41. The temperature dependence of the magnetic susceptibility ( $\chi$ ) of a paramagnetic material, with Curie temperature ( $T_c$ ), is given by :

(a)  $C / (T + T_c)$  for  $T > T_c$  (b)  $C / (T - T_c)$  for  $T < T_c$   
(c)  $C / (T + T_c)$  for all temperatures (d)  $C / (T - T_c)$  for  $T > T_c$

42. A semiconductor has  $10^{15}$  electrons/cm<sup>3</sup> ( $\mu_e = 5000$  cm<sup>2</sup>/V.s) and  $5 \times 10^{14}$  holes/cm<sup>3</sup> ( $\mu_h = 400$  cm<sup>2</sup>/V.s). If a field of 100V/cm is applied to it, total conductivity is

(a)  $83.2 (\Omega \text{ cm})^{-1}$  (b)  $0.832 (\Omega \text{ cm})^{-1}$  (c)  $0.832 (\text{m}\Omega \text{ cm})^{-1}$  (d)  $8.32 (\text{m}\Omega \text{ cm})^{-1}$

43. For a mole of ideal gas at  $T = 35^\circ\text{C}$ , what is the work done for an isothermal expansion from a volume  $V_0$  to  $10 V_0$ ?

(a)  $6 \times 10^3 \text{ J}$  (b)  $3 \times 10^3 \text{ J}$  (c)  $10^3 \text{ J}$  (d)  $10^4 \text{ J}$

44. An ideal monoatomic gas, initially at  $T = 20^\circ\text{C}$ , expands adiabatically from a volume  $V_0$  to  $5V_0$ . Then the final temperature is

(a)  $-20^\circ\text{C}$  (b)  $-33^\circ\text{C}$  (c)  $-173^\circ\text{C}$  (d)  $113^\circ\text{C}$

45. Consider a body of mass 5g, which is heated from 100 K to 300 K. The specific heat for the body is 0.1 cal/g/degree. The total change in the entropy of the body is approximately equal to

(a) 0.5 cal/degree (b) 100 cal/degree (c) 50 cal/degree (d) 0 cal/degree

46. Two diodes (Si and Ge) are connected in parallel as shown in the figure. Determine the output voltage  $V_0$ . The cut-in voltage for Si and Ge diodes are 0.7 V and 0.2 V, respectively.

- (a)  $-9.3 \text{ V}$       (b)  $-9.8 \text{ V}$       (c)  $+9.3 \text{ V}$       (d)  $+9.8 \text{ V}$
47. Let  $f : R \rightarrow R$  be given by  

$$f(x) = |x^2 - 1|, x \in R$$
  
 Then  
 (a)  $f$  is discontinuous at  $x = \pm 1$   
 (b)  $f$  has local maxima at  $x = 0$  but no local minimum  
 (c)  $f$  has local minima at  $x = \pm 1$  and a local maxima at  $x = 0$   
 (d)  $f$  has local minima at  $x = \pm 1$  but no local maximum
48. An infinite wire having uniform charge per unit length  $\lambda$  (where  $\lambda$  is negative) lies parallel to an infinite grounded conducting plane. The perpendicular distance between the wire and the plane is  $d$ . The maximum value of charge density induced on the plane is  
 (a)  $\frac{|\lambda|}{\pi d}$       (b)  $\frac{|\lambda|}{2\pi d}$       (c)  $\frac{2|\lambda|}{\pi d}$       (d)  $\frac{|\lambda|}{4\pi d}$
49. Two tuning forks with natural frequencies  $\nu_1$  and  $\nu_2$  respectively, are struck at the same time with equal force. The intensity, of the resulting sound, waxes and wanes with time period of 1.5 seconds while the frequency of the sound is 256 Hz. Hence,  $\nu_1$  and  $\nu_2$  respectively, are  
 (a) 256.333 Hz and 255.667 Hz      (b) 256.55 Hz and 255.55 Hz  
 (c) 256 Hz and 256.5 Hz      (d) 256.5 Hz and 257 Hz
50. A blackbody at a temperature of 6000 K emits radiation whose intensity spectrum peaks at 600 nm. If the temperature is reduced to 300 K, the spectrum will peak at  
 (a) 12 nm      (b) 120  $\mu\text{m}$       (c) 120 nm      (d) 12  $\mu\text{m}$
